

A measured hand pose becomes a better robot model

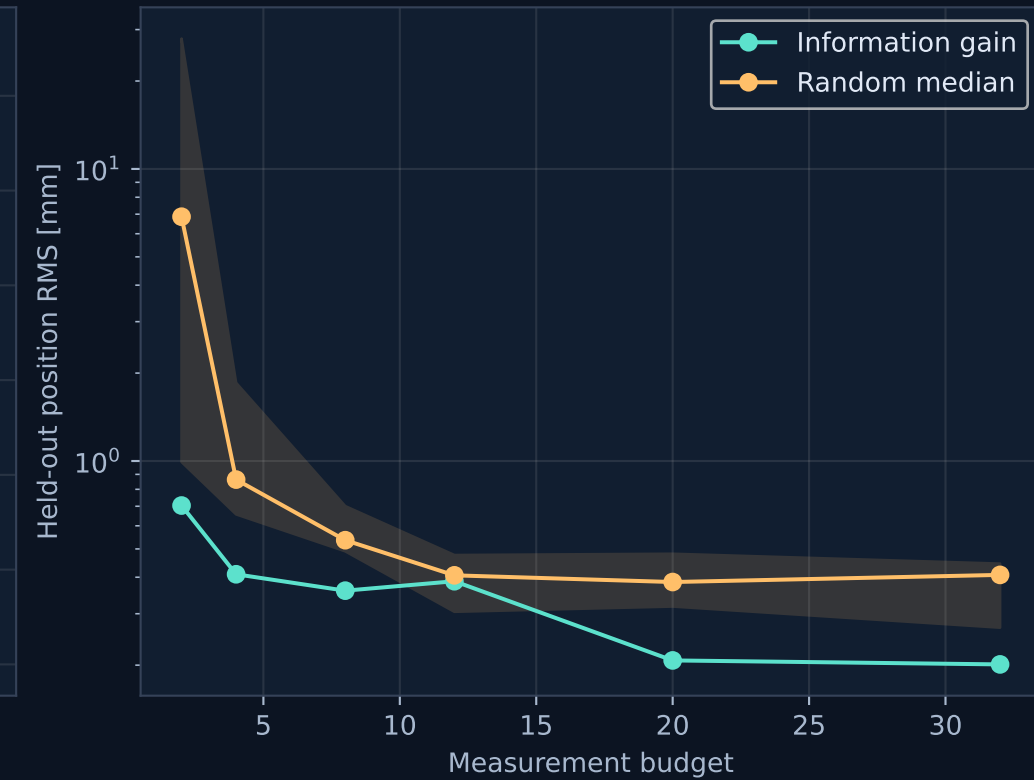

01 Fix the ghost arm

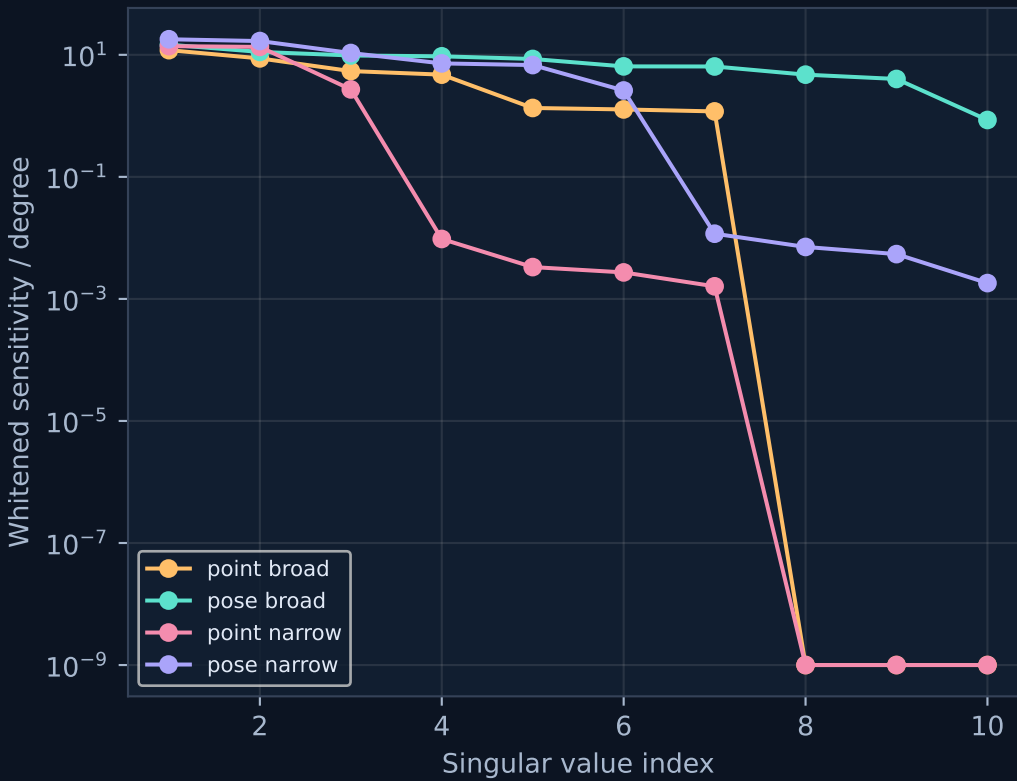

02 Hold the hand, move the elbow

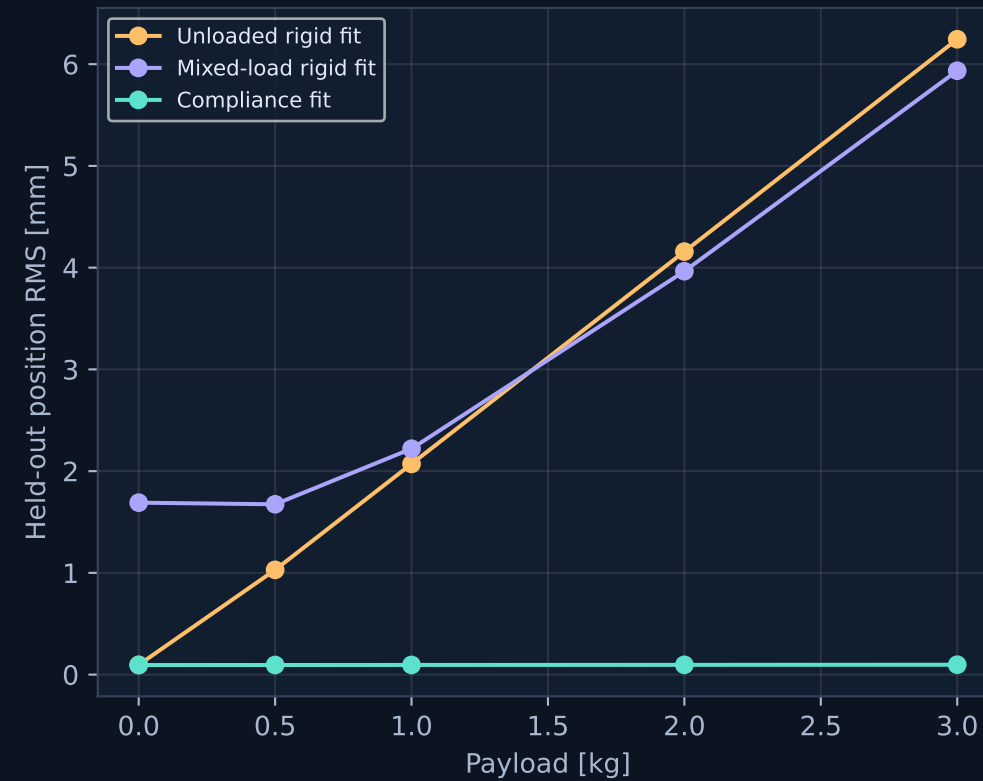

03 Choose the next pose

04 What is observable?

05 Geometry or arm flex?

CALIBRATION LAB

Seven joints. Five experiments.

Generic arm • synthetic observations

Known camera and base frames

Position and orientation evaluated separately

Fixed seeds • held-out configurations

Educational model, not 1X NEO hardware results.
